Women in Politics
2021
Women in parliament in 2020
The year in review

Introduction

Elections in 2020 were profoundly marked by the COVID-19 pandemic, resulting in delays and cancellations, logistical challenges for candidates and election administrators and often low turnout. Women’s leadership was frequently in the spotlight during the pandemic. The pandemic raised complex and deeply gendered challenges for citizens and created obstacles for MPs to communicate and engage directly with their constituents. It changed the ways parliaments operate, introducing flexibility and new technologies. A substantial number of MPs across the globe were infected, many lost their lives.

Women’s participation continued to grow by 0.6 per cent in 2020, passing the 25 per cent mark for combined upper and lower/single chambers worldwide for the first time (+0.7 points for lower/single chambers and +0.2 points in upper chambers). This is a similar rate of growth to the past decade. Several parliaments, such as Mali’s and Egypt’s, overcome remarkable...
A global snapshot of women in politics in 2021: the gains

- 25.5% of Parliamentarians are Women
- 20.9% of Speakers of Parliament are Women
- 5.9% of Heads of State are Women
- 6.7% of Heads of Government are Women
- 21.9% of Ministerial Positions are Held by Women

More women than ever before are at the highest levels of political power.

- +0.6% more women parliamentarians
- +0.4% more women speakers
- +2 more countries with women heads of state and/or government
- +0.6% more women holding ministerial portfolios

However, progress is moving very slow.
A global snapshot of women in politics in 2021: the losses

Women accounted for at least 50 per cent of members in just three parliaments: Rwanda, Cuba and the United Arab Emirates.

Three countries in the world currently have no women in their parliaments: Micronesia, Papua New Guinea and Vanuatu.

The number of countries in which women hold at least 50 per cent of ministerial positions dropped to 13 from 14 in 2020.

The number of countries with no women ministers increased from 9 to 12.
## Regional Parliamentary Trends following 2020 elections

Highlights in 2021 Parliaments

There has been progress in all regions of the world in terms of women’s representation, although unequal in advancements.

The top 10 most gender balanced unicameral parliaments and lower chambers has remained similar to last year, with the new addition of New Zealand at 5th from 20th.

There are 23 parliaments in the world that have 40 per cent of women representation or higher in their lower or single chambers, one less country than last year.

Among percentiles, the largest increase in number of countries fall within the 25-30 percent range. 11 countries have significantly increased the ratio of women in their parliaments in 2021 to join this new percentile range.

Highlights in 2021 Ministerial Portfolios

The **environment or energy portfolio** jumped from third place in 2020 to the top spot in 2021 of ministerial portfolios held by women.

Women's share in **traditionally male-led ministerial portfolios** (such as defence and finance) has slightly increased in 2021.

Women ministers continue to dominate portfolios covering **social affairs, women’s affairs and gender equality**.

The share of women ministers in charge of **foreign affairs portfolios** also saw a significant increase compared with last year, rising from 16.8% to 26%.

However, women only hold 22.4% of **health portfolios**.
How is COVID-19 changing politics for women?
Elections and COVID-19

57 countries held national parliamentary elections in 2020
20 countries postponed parliamentary elections mainly due to COVID-19

What are the obstacles women faced in running for office in 2020?

- Setbacks in campaigning and elections
- Violence against women in politics
- Access to funding
- Interruption of career paths due to economic downturn
- Exposure to online harassment and abuse
- Unequal access to online platforms

In Liberia, a woman senatorial candidate was reportedly beaten, harassed and threatened through the politicization of a traditional cultural practice.

Ghana experienced a 59% increase in the cost of running for political office, adding another impediment for women’s entry into public office.

Bolivia had to postpone their elections twice due to COVID-19.

In a province in Canada, police reported a 450% increase in online threats against politicians in 2020.
Violence Against Women in Politics: Online Violence a Growing Threat

Reports from all regions indicate that **online violence and harassment against women in politics increased** during campaigns and public life in general in 2020.

In an **Australian** 2020 survey on women in politics, 65% of respondents reported being exposed to internet abuse, and one in five feared physical safety.

Reports from **Kenya** indicate increased online violence and attacks against women in relation to the pandemic.

Online sexual harassment of women has doubled in the **United States** over the past three years.
Parliamentary processes and COVID-19

The pandemic changed the way parliaments operate. How have these new processes affected political representation and inclusivity?

**Exclusivity**
- Disruption of formal processes can cause reversion to past, exclusive practices
- Women face steeper adaptation curves in low-resource countries

**Inclusivity**
- Virtual engagement creates more personal connections with constituents
- Virtual voting promotes participation of PWDs and those with caring responsibilities
- Women can combine care-taking and political career aspirations

---

Inter-Parliamentary Union
How have tried and tested solutions fared during the COVID-19 pandemic?
Quotas prevent backsliding

In **25 out of 57 countries** that had elections in 2020, a gender quota was applied in some form.

Parliaments with legislated gender quotas elected:
- **11.8%** more women to single and lower chambers
- **7.4%** more women to upper chambers

Quotas acted as a **shield against backsliding** in 2020.

Only two countries with quotas experienced a relapse in representation*:
- **Burkina Faso** (-3.1 points): underscores the importance of adequate enforcement and political will
- **Jordan** (-4.6 points): reflects the broader trend of plateaus at quota levels

*This does not include countries with minor adjustments of less than 1.5 per cent or adjustments in countries within parity margins.*
Quotas and electoral systems

Adoption and effectiveness of legislated quotas by electoral system

- Quotas provide a significant advantage for women candidates in direct elections.
- 2020 election results show that electoral systems play a role in the adoption—but not the effectiveness—of quotas.
- **Quotas are less likely used in majoritarian electoral systems** compared to proportional or mixed systems.
- **Countries with quotas performed equally well** in both majoritarian and proportional or mixed electoral systems.
- A need to eliminate barriers to adopting quotas in majority-based systems.
The pandemic prompted MPs to respond to profoundly **gendered needs** among their constituents through **gender-sensitive responses**.

For example, **greater gender equality in legislatures** and female-headed health agencies were connected to **earlier adoption of stay-at-home orders**.
Gender parity in politics

The goal of achieving gender parity in decision-making and leadership is more crucial than ever.

Gender parity in political office and leadership is key to:

- Removing barriers to gender equality
- Opening politics to women from diverse backgrounds
- Transforming the political space into an enabling environment
- Addressing and reflecting demands of society
- More efficient, effective and legitimate political institutions

So how do we achieve gender parity in politics by 2030?

- Craft and adopt National Plans of Action
- Legislate gender quotas
- Reform discriminatory laws
- Cap spending on electoral campaigns
- Adopt laws to prevent gender-based violence
- Target parity in all aspects of public life
- Mandate and resource gender mainstreaming mechanisms
Thank you!
