

**Remarks at the Meeting of the Standing Committee on
Peace and International Security of the 142 IPU Assembly**

Mr. Dai Lizhong

Member of the National People's Congress

(26 April 2021)

Honorable President,

Distinguished Members of the Assembly,

I am Dr. Lizhong Dai, the representative of the National People's Congress of China and also the founder of Sansure Biotech, a listed company among the first batch of NMPA approved COVID-19 nucleic acid test providers in China.

Viruses have no borders. Solidarity and cooperation are the most powerful weapons to defeat the epidemic. At the Opening Ceremony of the 73rd World Health Assembly in May 2020, Chinese President Xi Jinping announced concrete measures to boost global fight against COVID-19 including providing international aid and making our country's COVID-19 vaccines public goods that are truly accessible to people in all countries. So far, China has provided practical support to more than 160

countries and international organizations. Now China is urgently providing needed vaccines to more than 100 countries and international agencies, fulfilling its solemn commitment to the world.

With great endeavors, China has made significant achievement in the fight against the epidemic. It took only around a month to initially control the spread of the epidemic, two months to control the daily increase of local cases down to single digits, and about three months to obtain a decisive victory of the Wuhan anti-epidemic effort. The secret behind the success is the "Four Early Strategy", namely early discovery, early reporting, early isolation, and early treatment. In China's "Four Early Strategy" implementation, Sansure is one of the important anti-epidemic supply providers. The Sansure solutions for covid-19 nucleic acid diagnosis are one of the most widely used solutions at home and abroad. In the meanwhile, a team of over 100 technical support engineers were sent by Sansure to countries severely affected by the pandemic to help them build nucleic acid test capacities to fight Covid-19. In total, tens of millions of people in more than 160 countries and regions benefited from our work. As a representative of the National People's Congress of China, I am honored to be able to

contribute to the joint fight to defeat the corona virus and to the protection of the lives and health of people of the global community.

Ladies and Gentlemen,

Friends,

Good health plays a crucial part in enabling a country and the world to develop in a sustainable way. Thank you for your leadership and partnership in our response yesterday and today. The Chinese National People's Congress is looking forward to continued collaboration with parliaments of IPU countries to overcome the pandemic and build a better tomorrow.

Thank you!
